THIS IS UNEVALUATED INFORMATION

1.

The Isaszeg Munitions Plant was located approximately two kilometers east of Isaszeg and on the northern side of the loose-surfaced road which ran southeast from Isaszeg.

25X1

2.

There were over seven thousand workers who worked on the construction of the munitions plant. Of this total, approximately five thousand workers were prisoners who were shipped there from various penal institutions and agricultural farms, and two thousand were conscripted "volunteer" laborers.

3.

The Isaszeg Munitions Plant consisted of four buildings. Each building was 40 meters long and 25 meters wide. Each building was two stories high and had a flat roof. The roofs were covered with asphalt and each roof had galvanized wire meshing. All the buildings were constructed of concrete.

4.

All the buildings had cement floors. Ventilation for each building on each floor was at the ceilings. The windows were located in the center of each building on all sides and the windows opened either upward or sideways.

5.

The buildings did not have basements. Electric and telephone service to all buildings were by underground cables. They were lead sheathed cables, which were approximately one meter underground. Power was supplied by Isaszeg, which in turn came from Budapest.

6.

A number of storage buildings (warehouses) were located southeast of the munitions buildings. These were of wooden construction and were two stories high. There were several wooden barrack buildings, each two stories high, which were located approximately 50 meters east of the munitions plant. These barracks housed the civilian employees. An internment area was located approximately 200 meters east of the munitions buildings, and included several barracks. These barracks also were constructed of wood and were two stories high.
